

EV Charge Point – customer premises information

Main incoming supply

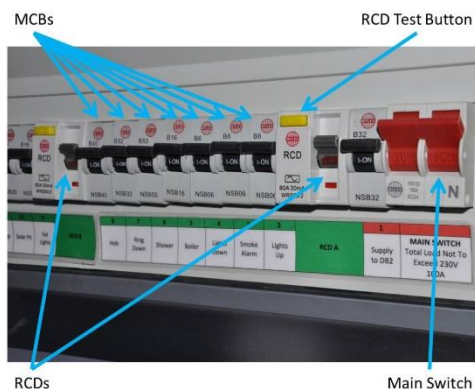

Please locate and photograph your main incoming mains electricity supply. Typical examples are shown below. This might be in a dedicated meter cupboard, garage, under stairs etc.

If possible, try to get a close-up of the fuse's rating eg. 100A, 80A. DO NOT touch or remove the fuse.

Consumer Unit

Please locate and photograph your main consumer unit. If possible, with the lid open to show Main switch and array of circuit breakers. DO NOT remove the cover.

Location of charge point

Please provide a photo of your desired location for the EV point, ideally 2-3 pictures showing the location and wider view for context.

If you are able to estimate the cable run distance, that would be helpful.

***** IN GATHERING THE INFORMATION ABOVE DO NOT TOUCH OR REMOVE ANY ITEMS OF ELECTRICAL SUPPLY EQUIPMENT. PHOTOGRAPHS ONLY *****
